

WHAT'S NEW IN NAVPAK, VERSION 17.0 - PAGE 1

NEW CREW STATS & CURRENCY MODULE – This new NAVPAK module is similar in scope to the PAX NAMES & ADDRESSES form, used for keeping track of Passenger data. This module keeps track of Crewmember information, including Address, Place of Birth, Citizenship, Social Security, Passport, Driver's License, and Alien Registration numbers and expiration dates. An alternate screen records Credit Card, Telephone Number, and Email information. Another alternate screen keeps track of Part 297 and 299 expirations, Medical expiration, and Part 293 expirations for first and second aircraft, with colored balls indicating status. Crew names can be pasted into this module from the Monthly Planner.

FBO ADDRESSES NOW INCLUDED – FBO street addresses, including city, state, and zip code, are now available in Airport Search. When you click on an FBO's listing, an FBO Details screen displays. The left-hand display, which contains telephone number, frequency, credit card, fuel brand, location, and business hours, can now be scrolled to reveal the address information. FBO street addresses can be pasted into the Leg Notes of the Passenger Schedule. Although the street addresses do not display on the *View* screen, they will paste with the rest of the FBO's data unless you click on the Click to exclude FBO addresses when pasting button.

MORE AIRPORT DIAGRAMS AVAILABLE – AC-U-KWIK has furnished NAVPAK with many new Airport Diagrams, particularly for non-US locations. 144 new Airport Diagrams have been added to the 17.0 release, bringing the total number of Airport Diagrams to nearly 700. These diagrams can be viewed by accessing an airport in Airport Search and clicking on the Apt.Diagram button. The Airport Diagram for that airport will display, (if one is available), along with a dropdown allowing access to all other Airport Diagrams in the database.

PRICE RANGES ENHANCED IN HOTEL SEARCH – Now Hotel Search listings for all countries except the United States and Canada will display price ranges in the *Hotel Details* section of the program. The Price Range displays in the *Rate* field to the right of the data in the *Drive mi from airport* field. This data will paste into the Pilot and Passenger Schedules from the Data Resources button, but not from the Pax Notes Leg dropdowns.

"TSA LIST NUMBER" COLUMN INCLUDED IN PILOT SCHEDULES – Previously, if you created a Passenger Manifest in the Scheduler module, the headings "TSA No-fly List," "Photo ID check," and "O'night parking" displayed next to the Manifest headings, so that check marks could be made next to passenger names. Now, "TSA List number" has been substituted for "O'night parking" on the Pilot Schedule and Pilot Schedule with Legnotes.

PRICE RANGES ENHANCED IN HOTEL SEARCH – Now Hotel Search listings for all countries except the United States and Canada will display price ranges in the *Hotel Details* section of the program. The Price Range displays in the *Rate* field to the right of the data in the *Drive mi from airport* field. This data will paste into the Pilot and Passenger Schedules from the **Data Resources** button, but not from the Pax Notes Leg dropdowns.

SELECT ALTERNATE MONTH OR AIRCRAFT IN "YOUR TEXT" CALENDAR – It is now possible to select another date range or aircraft in the creation mode of the Monthly Planner's "Your Text" Calendar.

WHAT'S NEW IN NAVPAK, VERSION 17.0 - PAGE 2

PASSENGER NUMBERS PRINTED IN MANIFEST IN SCHEDULER REPORTS – The passenger number is especially useful when the Manifest is split between two pages in the Report.

DISPLAY “US” (UNITED STATES) IN SCHEDULES – Sometimes States and Countries have the same 2-letter State or Country code. Printing “US” after domestic State codes helps clarify that an airport is in a foreign country or in the United States.

PASTING OF WEB SITES MAY BE DELETED FROM PASSENGER NOTES – When you paste FBO or Hotel information into the Passenger Notes, there is a “Click to Exclude web addresses when pasting” button available that remembers its setting.

THE NEW \$3.30 SEGMENT FEE INCLUDED IN BIDDER – The Domestic Segment Fee increases from \$3.20 to \$3.30. There is also a patch file available immediately for any company that has not yet received their 2006 NAVPAK.

DISPATCHER MAY TYPE NUMBER OF PASSENGERS IN BIDDER – Number of Passengers can now be typed as well as pasted. This enhancement is convenient for larger aircraft with a substantial number of seats and for making quick revisions.

NOTIFICATION IN SCHEDULER IF A DATE IS SAVED IN THE BIDDER – If you save a date in the Bidder, then go to the Scheduler and return to the Bidder, the date in the Scheduler overwrites the date in the Bidder. A pop-up in the Scheduler now informs you of this situation.

THE SCHEDULE NUMBER CAN NOW BE PASTED INTO BID – The Project Number dropdown on the Type of Usage/Project Number screen now includes “Schedule No.” If you click on that option, the Schedule Number will appear on the Bid and the Invoice.

A SIX-LINE ADDRESS HAS BEEN PROVIDED FOR BIDS & INVOICES – More room has been provided in the Bid and Invoice to show longer addresses.

PERSONAL- FBO INFORMATION NOW ACCESSIBLE ON REMOTE DRIVES – From the Non-Standard Directories screen, you can set “Personal Airports & FBOs” to an Alternate Path, and can now access both from a remote drive or Server.

NOW POSSIBLE TO PRINT PERSONAL FBO LIST IN AIRPORT SEARCH – Previously, you could print only information on individual Personal FBOs. Now you can print a list of all of the Personal FBOs in your database.

PERSONAL AIRPORTS SORTED BY CITY & AIRPORT ID IN AIRPORT SEARCH – Personal Aircraft listings can now be viewed by Airport City or by Airport Identifier. This sorting capability is designed to assist those dispatchers with a large number of personal airports, seaports or heliports.

LIST OF ALL PERSONAL AIRPORTS PRINTABLE IN AIRPORT SEARCH – Before version 17.0, only individual Personal Airport information could be printed. The lists can now be printed by Airport City or Airport Identifier. This function can be very helpful when there are too many airports for a single screen.

WHAT'S NEW IN NAVPAK, VERSION 17.0 - PAGE 3

A DOUBLE - CLICK OF A PERSONAL AIRPORT LISTING ACCESSES THE AIRPORT SEARCH SCREEN WITH PERSONAL AIRPORT LISTED – Traditionally, a dispatcher had to quit the Personal Airport screen to get to the Airport Search main screen. Now you can double-click on the Personal Airport listing to jump to the in Airport Search screen with the Personal Airport automatically selected.

CREW TIMEKEEPER REPORTS MORE ACCESSIBLE – The Monthly Duty, Flights, and Times report which displayed Time or Frequency Entries was previously only available from the Grid Display screen of the Timekeeper. Now this report is available from all Timekeeper screens, as are all of the other Timekeeper reports.

EXPANDED TIMEKEEPER 12-MONTH REPORT – The new Timekeeper 12-Month Summary now includes data on the five Time or Frequency Entries, with quarterly and yearly totals.

NEW TIMEKEEPER REPORT COMPARES PERFORMANCE OF SIX CREW MEMBERS – This new Timekeeper report is a 12-Month display, including quarterly and yearly totals, presenting accumulated Duty and Flight hours for up to six crew members.

EUROPEAN TOWER PHONE NUMBERS HAVE BEEN INCLUDED – This data is made available for the first time, greatly expanding the Tower telephone number data base for pilots that travel to foreign airports.

DISCOUNT CAN BE RETAINED WHEN SELECTING ALTERNATE AIRCRAFT – If you enter a Discount or other Adjustment on the Bidder screen, then access Waypoint Entry and click on the *Select another Aircraft* button, you will be prompted as to whether you wish to retain the current percentage discount/adjustment. If you click on *Yes*, the adjustment will be applied to the new Gross Aircraft Charge.

EASTERN EUROPEAN COVERAGE EXPANDED IN SUPER SEARCH – Countries bordering Western Europe have been added include Albania, Belarus, Bulgaria, Estonia, Finland, Greece, Latvia, Lithuania, Macedonia, Moldova, Romania, Russia, Serbia-Montenegro, Turkey, and Ukraine. Mid-year release planned.

SUPER SEARCH ANYWHERE IN RUSSIA – Russia is so large that we have given it a button and a land map of its own in the latest version of Super Search. That enhancement does much to show that the world's largest country is not rich in airports. In fact it is often necessary to set the search radius to maximum to find a contiguous airport to the east of the Ural Mountains.

ADDITIONAL COUNTRIES IN FINAL STATES OF PREPARATION – All of the following countries are near the end of data entry and testing for inclusion in Super Search. Countries added in the middle east include Afghanistan, Armenia, Azerbaijan, Bahrain, Bangladesh, Bhutan, Cyprus, Georgia, India, Indian Ocean Territory, Iran, Iraq, Israel, Jordan, Kazakhstan, Kuwait, Kyrgyzstan, Lebanon, Maldives, Nepal, Oman, Pakistan, Qatar, Saudi Arabia, Sri Lanka, Syria, Tajikistan, Turkmenistan, United Arab Emirates, Uzbekistan, and Yemen. Countries added in the Pacific basin include Brunei, Cambodia, Guam, Indonesia, Kiribati, Laos, Macau, Malaysia, Marshall Islands, Micronesia, Mongolia, Myanmar, Nauru, Northern Mariana Islands, Palau, Papua New Guinea, Philippines, Singapore, Solomon Islands, Thailand, East Timor, Tuvalu, and Vietnam. All of these countries will be included in upcoming releases.

WHAT'S NEW IN NAVPAK, VERSION 17.0 - PAGE 4

THE MONTHLY PLANNER RECEIVES A MAJOR UPGRADE – Version 17.0 of the Monthly Planner module has been singled out for a substantial number of enhancements that reflect many user suggestions and requests. The Crew Timesheet has also been enhanced in a number of ways, especially with respect to monitoring crew currency.

NOW THERE CAN BE THREE DIFFERENT TRIPS PER DAY PER AIRCRAFT – Traditionally, three aircraft listings had to be created to accommodate multiple flights in the same day with either *different crew or different clients*. Now up to three trips per day can be reported for one aircraft in the same daily record.

CALENDARS DISPLAY FIRST, SECOND, AND THIRD TRIPS PER DAY, AS WELL AS ALL THREE TRIPS PER DAY COMBINED – This includes all Calendar Reports. All other Monthly Planner Reports show all three trips per day per aircraft.

GRAPHIC DISPLAYS FOR VERTICAL AND FLEET CALENDARS – The Monthly Planner Data Entry screen now includes a Trip Start and a Trip Stop field. Times should be entered into these fields in 24-hour military format, like “0930” or “2350”. When data is entered into these fields, the Vertical Calendar and Fleet Calendar can then display this data in graphic form.

The graphic display for the Vertical Calendar will indicate whether the trip is the first, second, or third of the day, while indicating which crew members served on each flight. The graphic display for the Fleet Calendar uses six different colors to differentiate between six different aircraft, and splits each month into two pages in order to graph all pertinent data.

“USER DEFINED” CREW USAGE REPORT IN MONTHLY PLANNER NOW YEAR-TO-DATE AND/OR FULL YEAR – This Report previously showed data for only one month. There were no other report formats.

NEW “USER DEFINED” PAX REPORT IN MONTHLY PLANNER – This is a new Statistics Report by Key Passenger. It reports by Month, Year, or Year-to-Date on selected Statistics fields, with totals.

TRIP ROUTING AVAILABLE IN “USER DEFINED” REPORTS – The Monthly Planner “User Defined” Statistics reports now can display either Duty Start, Stop and Differential, or Trip Routing waypoints, by selecting the preferred option from the Menu Bar. This is the first time Trip Routing has been available in a Statistics report.

FIRST, SECOND, AND THIRD TRIPS DIFFERENTIATED ON SCREEN – The new Monthly Planner Data Entry screen now includes a *Data entry form - Options* button that incorporates the functions of the Save, Month Stream, and Modify or View Times & Amounts buttons. This button also calls a *SHOW all trips this month* function, which shows separate calendars for 1st, 2nd, and 3rd flights of the day.

MONTHLY PLANNER LISTS CAN BE UPDATED SEQUENTIALLY – Previously, each Monthly Planner List had to be accessed separately, reviewed or amended and closed. Then the next List would be selected and opened. Now, each List screen features the option *Set Up or Modify Other Lists* in the Menu Bar at the top of the screen. This streamlines the process of list creation and modification.
