

NAVPAK* – Scheduler • Bidder • Finder

NAVPAK is a software program designed for the needs of the dispatcher's side of business aviation, for both North American and International travel. NAVPAK's knowledge base contains an enormous amount of information about Airports, Navaids, Routes, and FBO services. NAVPAK itself is an expert Scheduler for both passenger and pilot use. Navpak is also a strong performer in the area of charter cost estimates, bids and invoices.

SUPER-SEARCH – add-on to basic NAVPAK

SUPER-SEARCH is a place name locator that lets you find places anywhere in North America, the Caribbean and the North Atlantic in order to identify nearby airports, airport services and enroute nav aids. SUPER-SEARCH provides even more flexible and extensive search features than are available from NAVPAK's standard AIRPORT-SEARCH module.

HOTEL-SEARCH – add-on to NAVPAK & SUPER-SEARCH

HOTEL-SEARCH is an information-rich directory of hotels and other lodging facilities located near airports throughout North America and International destinations. It relies heavily on FBO and pilot recommendations. HOTEL-SEARCH is integrated into NAVPAK's Scheduler function to make it easy to drop hotel references directly into leg notes of a Passenger or Pilot Schedule.
